

Plan of the Day for Sunday, 19 May 2013

Submitted by rutledge on Sun, 05/19/2013 - 09:37

Date:

Sunday, May 19, 2013 - 09:30

Discussion:

The plan of the day is simple. Collect lots of good data on anticipated significant weather in our area. We may see two rounds of weather today. The first could be a quasi-MCS around midday to early afternoon. Then a more significant wave of strong convection in the late afternoon to late evening hours. Instrumentation status is excellent. Be cognizant of rising water and severe weather during your IFLOODS travels today. A Rapid Scan Operation has been scheduled for the period from noon to midnight local. One may be called for tomorrow as well as the possibility of severe weather exists then as well.
